Overview

There are over 1.6 million new cancers every year in the United States of America with over 50,000 new cases every year in North Carolina. This currently translates into nearly 600,000 cancer deaths nationally and nearly 20,000 in our state of North Carolina every year.

Advances in cancer treatment are rapidly changing and greatly improving outcomes for patients with cancer. The Annual Meeting of the American Society of Clinical Oncology is where all of these advances in cancer medicine are presented and discussed.

This conference is aimed to provide an update and review of the most current advances in treating cancer that were presented and discussed at the 2019 Annual Meeting of the American Society of Clinical Oncology.

Lectures and interactive Tumor Board Case Presentations will discuss the importance and impact of these advances on daily management and treatment decision making for patients with cancer.

Target Audience

This conference has been planned for Oncologists, Nurse Practitioners, Physician Assistants, Nurses, Pharmacists, and other health care providers involved in care of oncology patients.
